

MINERAL RIGHTS LEASING COMMITTEE

UPDATE

26 SEPTEMBER 2011

At the Annual Member Meeting in August I reported for the MRLC that EMCC was not involved in any current negotiations for a gas lease. That situation continues. I also reported that the Club had not given permission to any organization to conduct seismic testing on Club property – not because we were opposed to such testing but because we desired such testing to be carried out in a manner that was acceptable to us. At the end of September we granted Geokinetics the right to do seismic testing on Club property. The testing will be conducted in a “cable only” manner which means there will be no drilling on any of our property and no blasting. We also conditioned the Club’s permission on review and acceptance of Geokinetics work plan by the MRLC. Very few Geokinetic man hours will be spent on our property and any cables and recording devices placed on the property will be there for a short period of time.

Bob Zelten (for the MRLC)
